

CAN-O-WORMS™

"Odourless Living Composter"

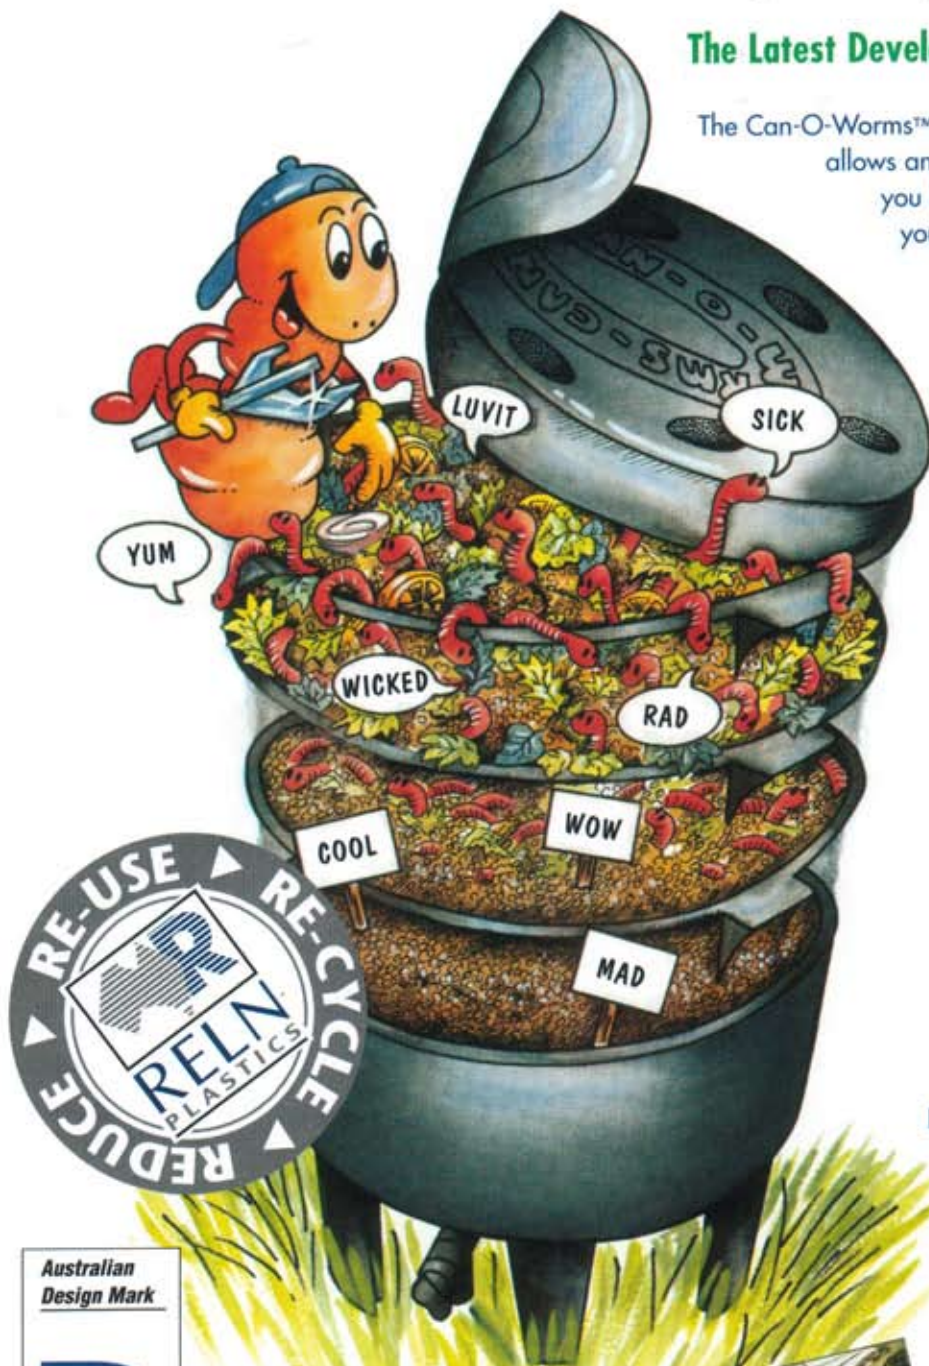

The Latest Development In Food Waste Recycling

The Can-O-Worms™ is an odourless, user friendly system that allows anyone to participate in recycling. Whether you live in an apartment or have a backyard, you can provide organic fertiliser for indoor plants and your garden. For keen fishermen the unit will breed up to 20,000 bait worms which are easily removed from the top! Its patented concept was awarded an Australian Design Award.

A simple Instruction Manual explains the easy operation of the system with common questions and answers. Harvesting is easy because the worms 'eat their way up' leaving their rich castings behind which are readily removed, free of worms. Liquid fertiliser is also produced and dispersed through a tap. The Can-O-Worms™ is fly and pest proof and stands on five sturdy legs.

"Taking Out The Garbage Has Never Been So Much Fun."

Do your bit for the environment: "Reduce, Re-Use, Recycle" - it's easy. The Can-O-Worms™ is made from 100% recycled plastic.
